PROFESSIONAL SUMMARY

Senior Software Engineer with 14 years of experience designing and building scalable, secure, high-performance enterprise systems using the Java ecosystem. Specializes in transforming legacy architectures into modern, cloud-ready solutions, and leading technical teams to deliver business value. Combines strong technical expertise with a strategic mindset, bridging the gap between business goals and technology. Passionate about mentoring, clean code, and end-to-end ownership.

TECHNICAL SKILLS

Backend	Java 17, C#, C/C++, PHP, Spring, Spring Boot, JHipster, Hibernate, JPA, Microservices, REST APIs, RabbitMQ, Netflix OSS (Zuul, Ribbon, Eureka, Hystrix)
Frontend	JavaScript / TypeScript, Angular, React, HTML, CSS, Tailwind, JSP, JSTL, Servlets, Yarn, Webpack, npm
Database	Oracle PL/SQL, SQL Server, MySQL, PostgreSQL, H2, MongoDB, Redis, ELK Stack, Liquibase
DevOps & Tools	Git, Jenkins, Gradle, Maven, Ant, Docker, JIRA, Confluence, AWS, Swiss Cloud
XML & Data	Schematron, XML, XSL, XSLT, XPath, UML, Penpot
Testing	JUnit, Selenium, Mockito, Cucumber, Jmeter
Languages	Serbian (native), English (fluent), Russian (basic)

PROFESSIONAL EXPERIENCE

DroneEye – Full Stack Developer

August 2024 – Present
Independent project – drone pilot platform.

- Designed and built full-stack web app with **Java 21, Spring Boot, PostgreSQL**.
- Containerized the application using **Docker** for consistent dev & deployment.
- Developed responsive UI with **React, Next.js**.
- Managed code with **GitHub**, following best practices for branching & collaboration.
- Focused on clean architecture, security, and scalability from day one.

Senior Java Developer – NTT Data

October 2022 – March 2025 | Belgrade

Client: MHP (Porsche)

- Maintained and enhanced multi-service platform for vehicle processes (requests, reports, campaigns, loan settlements).
- Resolved Splunk alerts, developed new features, increased test coverage.
- Led migration from **COBOL to Java**.
- Deployed releases across environments including production.
- Followed **SAFe** methodology.

Client: Bedag Informatik AG

- Worked on ePolice platform for processing requests from authorities and citizens.
- Maintained applications, fixed bugs, developed new functionalities.
- Migrated data from external services.

Client: European Commission

- Built and maintained **OOTS interoperability system**.
- Created **LCM library** used by all EU member states for business-rule validation.
- Developed **Schematron validator** for XML validation (schema, content, structure).
- Wrote documentation, performed testing, refactored and improved existing code.

Senior Java Developer – Telxira

February 2022 – October 2022 | Belgrade

- Developed multi-platform SMS processing (chat, email, SMPP, HTTP).
- Dockerized multiple environments and profiles.
- Integrated **Liquibase** for database versioning.
- Implemented CDR generation and export.
- Followed **CI/CD** practices.

Senior Solution Architect – Excela

February 2021 – February 2022 | Belgrade

- **Open Banking / Financial services**
- Supervised and mentored development teams.
- Organized work, prepared technical tasks, made technology decisions.
- Designed and documented architecture solutions.
- Coordinated with multiple teams and stakeholders.
- Delegated tasks according to team skills.
- Led technical discussions and followed up on implementation.

Lead Software Engineer – Persida (CentoGene)

September 2018 – February 2021 | Belgrade

- **Bioinformatics domain – clinical & genetic data transformation**
- Designed and developed projects from scratch using **microservices architecture**.
- Maintained and built custom laboratory applications.
- Analyzed business logic and translated into workflows and user stories.
- Managed distributed teams (Berlin, Rostock, Belgrade).
- Applied **CI/CD** methodologies.

Service Engineer – 3AP

January 2017 – July 2018 | Belgrade

- **Smart warehouse / IoT application**
- Built project from scratch using **JHipster** (microservices).
- Agile (Scrum / Kanban) environment.
- Analyzed business logic, created user stories and tasks.

Service Engineer – Fincore Group

December 2015 – January 2017 | Belgrade

- **Casino club project**
- Set up servers and services for gaming systems.
- 24/7 developer support.
- Developed **"Check games"** support app using Spring Boot & AngularJS.
- Analyzed business logic for gaming, betting, gambling systems.

Java Software Designer – MERA Software Services

April 2015 – December 2015 | Belgrade

- **Smart home automation**
- Configured router devices with build server.
- Developed smart home integration simulator.

IT Designer & Development Engineer – Societe Generale Bank

September 2012 – April 2015 | Belgrade

- **Financial software development**
- Supported information and reporting systems.
- Analyzed financial data, migrated databases.
- Implemented payment system products.
- Tested and maintained internal/external applications.
- Implemented security policies and wrote technical documentation.

EDUCATION

University of Belgrade, School of Electrical Engineering
Graduate Electrical Engineer – Computer Science and Informatics
2004 – 2012

INTERESTS & ADDITIONAL

- **Interests:** Modern software architecture, AI, business process optimization
- **Driver license:** Category C
- **Hobbies:** Skiing, basketball, reading, cycling, salsa, swimming, running, music, history, travel
